THE PROJECT

SIG HABITAT project (Information and Management System of the Sustainable Habitat Cluster) aims to be a promoter of the Habitat value chain at national and international level, fostering cooperation in innovation and business opportunities between companies, R&D centers and other entities, centralizing relevant information for the Habitat value chain.

BENEFITS

The SIG HABITAT platform (www.sighabitat.pt) results in several benefits for entities in the Habitat value chain:

- Mapping relevant research and innovation skills and competences of the Habitat value chain;
- Mapping companies and other agents, promoting their business areas, types of products or services and their innovation needs.

Structured in a georeferenced database, registered members in this platform can be publicly consulted through different criteria.

SIG HABITAT provides collaboration and interaction tools among its registered members as well as information and promotion of:

- Registered members on the platform;
- Products, technologies and solutions of members for the Habitat;
- R&D and Innovation projects;
- Collaborative actions between members;
- Different activities, technical information and regulation;
- Training actions information (fairs, seminars, congresses, etc.) relevant to the Habitat value chain;
- News about members, external markets and business opportunities.

REGISTRATION:

Direct and personalized registration can be done directly on the SIG HABITAT platform (www.sighabitat.pt).
